

Service Manual

**ORDER NO.
ARP 1812**

FM/AM DIGITAL SYNTHESIZER TUNER

F-656 F-656-S

F-656 AND F-656-S HAVE FOLLOWING VERSIONS:

Type	Applicable model		Power requirement	Destination
	F-656	F-656-S		
KUC	○	—	AC120V only	U. S. A. and Canada
HE	○	—	AC220V, 240V (switchable)*	European continent
HB	○	—	AC220V, 240V (switchable)*	United Kingdom
HEZ	○	○	AC220V, 240V (switchable)*	West Germany
HIX1B	○	—	AC220V, 240V (switchable)*	Italy

*Change the connection of the TUNER ASSEMBLY primary pins.

- This manual is applicable to the KUC, HE, HB, HEZ and HIX1B types.
- For the F-656/HE, HB, HEZ, HIX1B and F-656-S/HEZ types, refer to page 25 — 27.
- The F-656-S is the same as the F-656 except for color.
- Ce manuel pour le service comprend les explications en français de réglage.
- Este manual de servicio trata del método ajuste escrito en español.

1. SAFETY INFORMATION

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

2. EXPLODED VIEWS, PACKING AND PARTS LIST

- NOTES:
- Parts without part number cannot be supplied.
 - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

Mark	No.	Part No.	Description

5. ADJUSTMENTS

FM SECTION

- For connections and points to be adjusted, refer to Fig. 5-1 and Fig. 5-2.
- Set the function selector to "FM".
- Set the "IF BAND" and "CCTS" switches on the front panel to "OFF".

Step No.	FM SG (1 kHz \pm 75 kHz dev.)		F-656 type (F-656-S) Reception frequency display	Adjustment	
	Frequency (MHz)	Level (dB μ)		Adjustment location	Specifications
1	—	—	87.5 MHz	—	Confirm that the DC voltage between TP101 (VT OSC) and TP110 (GND) is 3.4 V \pm 2.0 V.
2	—	—	108.0 MHz	—	Confirm that the DC voltage between TP101 (VT OSC) and TP110 (GND) is 8.7 V \pm 2.0 V.
3 (*1)	IF BAND SW = NORMAL, CCTS SW = OFF				
	98.0	20 — 30	98.0 MHz	L302, T301, T302	Adjust that the DC voltage between TP104 (FM SM) and TP110 (GND) is maximum.
4	IF BAND SW = NORMAL, CCTS SW = OFF				
	98.0	80	98.0 MHz	T501-(A)	Adjust that the DC voltage between TP106 (VREF) and TP107 (TM) is 0 V \pm 100 mV.
				T501-(B) VR503	Adjust so that the mono distortion of the output is at minimum.
	Repeat steps 4— ① and 4— ② until both specification ratings are satisfied.				
5	98.0	60	98.0 MHz	VR506	Adjust so that the waveform of TP105 (SUB) is at minimum.
6	98.0	60	98.0 MHz	VR508	Adjust so that the pilot cancel volume of the output is maximum.
7	98.0	60 (No modulation)	98.0 MHz	VR507	Adjust that the frequency between TP108 (VCO 38 kHz) and TP110 (GND) is 38 kHz \pm 100 Hz. (*2)
8	Adjust so that IF BAND SW = NORMAL, CCTS SW = OFF, T302 is within \pm 90°.				
	98.0	80 (*3)	98.0 MHz	VR503, T302 (*4)	Adjust so that the stereo distortion of the output is at minimum.
9	98.0	60	98.0 MHz	VR501, VR502	Adjust so that the separation of the output is at minimum.
10	IF BAND SW = NORMAL, CCTS SW = OFF				
	98.0	90	98.0 MHz	VR505	Adjust that the DC voltage between TP104 (FM SM) and TP110 (GND) is 4.9 V \pm 0.2 V.
11	IF BAND SW = NORMAL, CCTS SW = OFF				
	98.0	—	98.0 MHz	VR504	Adjust so that there is muting when the output is 15 dB \pm 4 dB.

(*1) This adjustment is only with types HE, HB, KUC.

(*2) Wait at least one minute after turning the Power SW on before carrying out adjustments.

(*3) Stereo modulation: Main 1 kHz, L+R \pm 68.25 kHz, Pilot 19 kHz \pm 6.75 kHz.

(*4) T302 is only on types HE, HB and KUC. If stereo distortion does not improve on HEZ and HIX1B, adjust the IFT coil (Fig. 5-2) in the front end to within \pm 90°.

Fig. 5-1

AM SECTION

- For connections and points to be adjusted, refer to Fig. 5-1 and Fig. 5-2.
- Set the function selector to "AM".

Step No.	AM SG (400 Hz, 30% modulation)		F-656 type (F-656-S) Reception frequency display	Adjustment	
	Frequency (kHz)	Level (dB μ)		Adjustment location	Specifications
1	—	—	522 kHz (530 kHz)	TC201	Adjust that the DC voltage between TP101 (VTOSC) and TP110 (GND) is $1.25 \text{ V} \pm 0.2 \text{ V}$.
2	—	—	1629 kHz (1700 kHz)	L202	Adjust that the DC voltage between TP101 (VTOSC) and TP110 (GND) is $10.0 \text{ V} \pm 0.3 \text{ V}$.
3	Repeat steps 1 and 2 until both specification ratings are satisfied.				
4	603 (600)	20 — 30	603 kHz (600 kHz)	T201	Adjust that the DC voltage between TP103 (AM SM) and TP110 (GND) is maximum.
5	1395 (1400)	20 — 30	1395 kHz (1400 kHz)	TC202	Adjust that the DC voltage between TP103 (AM SM) and TP110 (GND) is maximum.
6	Repeat steps 4 and 5 until both specification ratings are satisfied.				
7	999 (1000)	20 — 30	999 kHz (1000 kHz)	T202	Adjust that the DC voltage between TP103 (AM SM) and TP110 (GND) is maximum.
8	CCTS SW — OFF				
	999 (1000)	100	999 kHz (1000 kHz)	VR201	Adjust that the DC voltage between TP103 (AM SM) and TP110 (GND) is $4.9 \text{ V} \pm 0.2 \text{ V}$.

NOTE: Those sections in parentheses show the frequency with KUC type (10 kHz Step).

Fig. 5-2

FM Front End
For HEZ and HIX1B types

5. RÉGLAGE

SECTION FM

- Pour les connexions et les points à régler, se reporter à la Fig. 5-1 et Fig. 5-2.
- Mettre le sélecteur fonction sur "FM".
- Mettre les sélecteurs "IF BAND" et "CCTS" du panneau frontal sur "OFF".

N° d'étape	Signal FM (1 kHz \pm 75 kHz dév.)		Type (F-656-S) Affichage de réception de la fréquence	Réglage	
	Fréquence (MHz)	Niveau (dB μ)		Emplacement de l'ajustement	Spécifications
1	—	—	87,5 MHz	—	Confirmer que la tension CC entre TP101 (VT OSC) et TP110 (GND) est de 3,4 V \pm 2,0 V.
2	—	—	108,0 MHz	—	Confirmer que la tension CC entre TP101 (VT OSC) et TP110 (GND) est de 8,7 V \pm 2,0 V.
3 (*1)	Sélecteur IF BAND = NORMAL, sélecteur CCTS = OFF				
	98,0	20 — 30	98,0 MHz	L302, T301, T302	Régler la tension CC entre TP104 (FM SM) et TP110 (GND) pour qu'elle soit maximum.
4	Sélecteur IF BAND = NOMAL, sélecteur CCTS = OFF				
	98,0	80	98,0 MHz	T501-(A)	Régler la tension CC entre TP106 (VREF) et TP107 (TM) pour qu'elle soit de 0 V \pm 100 mV.
				T501-(B) VR503	Régler pour que la distorsion mono de la sortie soit au minimum.
	Répéter les étapes 4— ① et 4— ② jusqu'à ce que les deux rapports de spécification soient satisfaits.				
5	98,0	60	98,0 MHz	VR506	Régler de façon à ce que la forme d'onde de TP105 (SUB) soit au minimum.
6	98,0	60	98,0 MHz	VR508	Régler de façon à ce que le volume d'annulation pilote soit au maximum.
7	98,0	60 (pas de modulation)	98,0 MHz	VR507	Régler de façon à ce que la fréquence entre TP108 (VCO 38 kHz) et TP110 (GND) soit de 38 kHz \pm 100 Hz. (*2).
8	Régler pour que le sélecteur IF BAND = NORMAL, le sélecteur CCTS = OFF, T302 soit \pm 90°.				
	98,0	80 (*3)	98,0 MHz	VR503, T302 (*4)	Régler de façon à ce que la distorsion stéréo de la sortie soit minimum.
9	98,0	60	98,0 MHz	VR501, VR502	Régler de façon à ce que la séparation de la sortie soit minimum.
10	Sélecteur IF BAND = NORMAL, sélecteur CCTS = OFF				
	98,0	90	98,0 MHz	VR505	Régler de façon à ce que la tension CC entre TP104 (FM SM) et TP (110) soit 4,9 V \pm 0,2 V.
11	Sélecteur IF BAND = NORMAL, sélecteur CCTS = OFF				
	98,0	—	98,0 MHz	VR504	Régler de façon à ce qu'il y ait un assourdissement lorsque la sortie est de 15 dB \pm 4 dB.

(*1) Cet ajustement n'est valable que pour les types HE, HB, KUC.

(*2) Attendre au moins une minute après avoir mis le sélecteur d'alimentation en action avant d'effectuer ces ajustements.

(*3) Modulation stéréo: Principal 1 kHz, L + R \pm 68,25 kHz, Pilote 19 kHz \pm 6,75 kHz.

(*4) T302 n'est valable que pour les types HE, HB et KUC. Si la distorsion stéréo ne s'améliore pas sur HEZ et HIX1B, ajuster la bobine IFT (Fig. 5-2) sur l'extrémité avant entre \pm 90°.

Fig. 5-1

SECTION AM

- Pour les connexions et les points à régler, se reporter à la Fig. 5-1 et Fig. 5-2.
- Mettre le sélecteur fonction sur "AM".

N° d'étape	Signal AM (400 Hz, 30% modulation)		Type (F-656-S) Affichage de réception de la fréquence	Réglage	
	Fréquence (kHz)	Niveau (dB μ)		Emplacement de l'ajustement	Spécifications
1	—	—	522 kHz (530 kHz)	TC201	Régler de façon à ce que la tension CC entre TP101 (VTOSC) et TP110 (GND) soit de 1,25 V \pm 0,2 V.
2	—	—	1629 kHz (1700 kHz)	L202	Régler de façon à ce que la tension CC entre TP101 (VTOSC) et TP110 (GND) soit de 10,0 V \pm 0,3 V.
3	Répéter les étapes 1 et 2 jusqu'à ce que les deux rapports de spécification soient satisfaits.				
4	603 (600)	20 — 30	603 kHz (600 kHz)	T201	Régler de façon à ce que la tension CC entre TP103 (AM SM) et TP110 (GND) soit maximum.
5	1395 (1400)	20 — 30	1395 kHz (1400 kHz)	TC202	Régler de façon à ce que la tension CC entre TP103 (AM SM) et TP110 (GND) soit maximum.
6	Répéter les étapes 4 et 5 jusqu'à ce que les deux rapports de spécification soient satisfaits.				
7	999 (1000)	20 — 30	999 kHz (1000 kHz)	T202	Régler de façon à ce que la tension CC entre TP103 (AM SM) et TP110 (GND) soit maximum.
8	Sélecteur CCTS = OFF				
	999 (1000)	100	999 kHz (1000 kHz)	VR201	Régler de façon à ce que la tension CC entre TP103 (AM SM) et TP100 (GND) soit de 4,9 V \pm 0,2 V.

REMARQUE: Les sections entre parenthèses montrent la fréquence avec le type KUC (pas de 10 kHz).

Fig. 5-2

5. AJUSTE

SECCIÓN DE FM

- Con respecto a las conexiones y puntos de ajuste, consulte la Fig. 5-1 y Fig. 5-2.
- Ponga el selector función en "FM".
- Ponga los interruptores "IF BAND" y "CCTS" del panel frontal en "OFF".

No. de paso	FM SG (1 kHz \pm 75 kHz dev.)		Tipo F-656 (F-656-S)	Ajuste	
	Frecuencia (MHz)	Nivel (dB μ)	Visualización de la frecuencia de recepción	Lugar de ajuste	Especificaciones
1	—	—	87,5 MHz	—	Confirme que la tensión de CC entre TP101 (VT OSC) y TP110 (GND) sea de 3,4 V \pm 2,0 V.
2	—	—	108,0 MHz	—	Confirme que la tensión de CC entre TP101 (VT OSC) y TP110 (GND) sea de 8,7 V \pm 2,0 V.
3 (*1)	IF BAND SW = NORMAL, CCTS SW = OFF				
	98,0	20 – 30	98,0 MHz	L302, T301, T302	Ajuste de forma que la tensión de CC entre TP104 (FM SM) y TP110 (GND) sea máxima.
4	IF BAND SW = NORMAL, CCTS SW = OFF				
	98,0	80	98,0 MHz	T501-(A)	Ajuste hasta que la tensión de CC entra TP106 (VREF) y TP107 (TM) sea de 0 V \pm 100 mV.
				T501-(B) VR503	Ajuste hasta que la distorsión monoaural de salida sea mínima.
Repita los pasos 4— ① y 4— ② hasta que se cumplan ambos valores especificados.					
5	98,0	60	98,0 MHz	VR506	Ajuste hasta que la forma de onda de TP105 (SUB) esté al mínimo.
6	98,0	60	98,0 MHz	VR508	Ajuste hasta que el volumen de cancelación de la señal piloto de la salida sea máximo.
7	98,0	60 (Sin modulación)	98,0 MHz	VR507	Ajuste hasta que la frecuencia entre TP108 (VCO 38 kHz) y TP110 (GND) sea de 38 kHz \pm 100 Hz. (*2)
8	Ajuste hasta que IF BAND SW = NORMAL, CCTS SW = OFF, T302 sea \pm 90°.				
	98,0	80 (*3)	98,0 MHz	VR503, T302 (*4)	Ajuste hasta que la distorsión estéreo de la salida sea mínima.
9	98,0	60	98,0 MHz	VR501, VR502	Ajuste hasta que la separación de la salida esté al mínimo.
10	IF BAND SW = NORMAL, CCTS SW = OFF				
	98,0	90	98,0 MHz	VR505	Ajuste hasta que la tensión de CC entre TP104 (FM SM) y TP110 (GND) sea de 4,9 V \pm 0,2 V.
11	IF BAND SW = NORMAL, CCTS SW = OFF				
	98,0	—	98,0 MHz	VR504	Ajuste hasta que haya silenciamiento cuando la salida sea de 15 dB \pm 4 dB.

(*1) Este ajuste es solamente para los tipos HE, HB, y KUC.

(*2) Antes de realizar los ajustes, espere por lo menos un minuto después de poner en ON el interruptor POWER.

(*3) Modulación estéreo: Principal 1 kHz, canales izquierdo + derecho \pm 68,25 kHz, y piloto 19 \pm 6,75 kHz.

(*4) T302 es solamente para los tipos HE, HB, y KUC. Si la distorsión estéreo no mejora en HEZ y HIX1B, ajuste la bobina IFT (Fig. 5-2) de la etapa de entrada a \pm 90°.

Fig. 5-1

SECCIÓN DE AM

- Con respecto a las conexiones y puntos de ajuste, consulte la Fig. 5-1 y Fig. 5-2.
- Ponga el selector función en "AM".

Para los tipos HEZ y HIX1B

6. ELECTRICAL PARTS LIST

NOTES:

- Parts without part number cannot be supplied.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560 Ω	56×10^1	561.....	RD1/4PS Δ Δ Δ J
47k Ω	47×10^3	473.....	RD1/4PS Δ Δ Δ J
0.5 Ω	0R5.....		RN2H Δ Δ Δ K
1 Ω	010.....		RS1P Δ Δ Δ K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω	562×10^1	5621.....	RN1/4SR Δ Δ Δ Δ F
----------------	-------------------	-----------	---

7. FOR F-656/HE, HB, HEZ, HIX1B AND F-656-S/HEZ TYPES

7.1 CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

The F-656/HE, HB, HEZ, HIX1B and F-656-S/HEZ types are the same as the F-656/KUC type with the exception of the following sections.

Power supply ON/OFF sequence.

<Power supply ON>

Rises under one of the two following conditions.

- (1) V_{CC} = 5 V ± 10%. Returning to H upon maintaining RESET terminal in L for 2 μs or more.
- (2) When there has been 32 interrupts in INT₂.

<Power supply OFF>

Back-up under the following conditions.

INT₂ = 60 ms or more and AC has not entered.

INT₂ becomes the interrupt mode only during back-up. It is normal input state at normal times and there is one-time polling to timer Q at 5 ms.

Main unit key	Remote control key	SR code	Function
IF BAND	None		With FM: Synchronizes Normal/Super Narrow switching display to switch. With AM: WIDE ON/OFF. Displays NORMAL during wide. There is a mute for approx. 1 second during switching. Mode Memory is possible.
RF ATT	None.		Switches between RF ATT ON/OFF each time it is pressed. Display RF ATT when ON. Operates only during FM. Mode memory possible. There is a mute for approx. 1 second during switching.
POWER	POWER	A4 1C	Power supply goes ON or OFF each time this is pressed. LED lights when power supply in ON. If the Memory key and this key (main unit only and double push) are pressed down during the power ON. All FL displays will extinguish (operations are normal). If any key other than Power is pressed in this state, the FL displays will light for 5 seconds and then extinguish (operations of the pressed keys are normal). However, during UP/DOWN of frequency, the FL display is lit. The displays are extinguished after approx. 5 seconds of frequency UP/DOWN stops. POWER OFF releases this mode.
None	POWER ON	A4 1A	Turns power ON when power is OFF. No work when power is ON.
None	POWER OFF	A4 1B	Turns power OFF when power in ON. No work when power is OFF.
None	BAND	A4 13	Frequency band is changed each time this is pressed. FM — AM
None	MEMORY UP	A4 10	Calls one large ST from the ST No. in the present state. Continuous operation is possible. Call ST 1 when there is no ST No. Mute for approx. 1 second.
None	MEMORY DOWN	A4 11	Calls one small ST from the ST No. in the present state. Continuous operation is possible. Calls ST 24 when there is no ST No. Mute for approx. 1 second.

Auto Stop

- Goes to Stop if it receives signals from a station that fulfills conditions of 2 or more signal meters lit during Auto mode.

Test mode

The data below is loaded when P05 = L.

ST	9 k step	10 k step	ST	9 k step	10 k step
1	FM 87.50 M	FM 87.5 M	7	FM 108.00 M	FM 108.0 M
2	FM 89.00 M	FM 89.0 M	8	AM 531 k	AM 530 k
3	FM 90.00 M	FM 90.0 M	9	AM 603 k	AM 600 k
4	FM 99.00 M	FM 99.0 M	10	AM 1008 k	AM 1000 k
5	FM 106.00 M	FM 106.0 M	11	AM 1395 k	AM 1400 k
6	FM 107.00 M	FM 107.0 M	12	AM 1602 k	AM 1700 k

ST13 — 24

: 9k step AM 1602k
: 10k step AM 1700k

IF Band is normal, MPX is Auto.

Key input, remote control input function table.

Main unit key	Remote control key	SR code	Function
ST 1	ST 1	A4 01	<p>When this is pressed once, ST1 to 12 are called individually (ST mode 1). If pressed again within two seconds, ST13 to 24 are called individually (ST mode 2). Each time it is pressed, the display changes back and forth between mode 1 and mode 2 ST. If the key is not pressed after that, it carries out CCTS operation (when CCTS is ON).</p> <p>The MUTE time is approx. 1 second when CCTS is OFF.</p>
ST 2	ST 2	A4 02	
ST 3	ST 3	A4 03	
ST 4	ST 4	A4 04	
ST 5	ST 5	A4 05	
ST 6	ST 6	A4 06	
ST 7	ST 7	A4 07	
ST 8	ST 8	A4 08	
ST 9	ST 9	A4 09	
ST 10	ST 10	A4 00	
ST 11	ST 11	A4 46	
ST 12	ST 12	A4 47	
CCTS	None		Changes the CCTS mode each time it is pressed. During operation CCTS blinks and the S meter is extinguished. Then MUTE is on for approx. 3 seconds. When the operation is finished, CCTS lights and Mode Memory is not possible.
MEMORY	None		<p>When this is pressed once, the unit goes to memory mode. When it is pressed again, it is released. If it is pressed repeatedly following this the operation is repeated. If ST key is pressed when MEMORY blinks (for approx. 5 seconds.), it will wait approx. 2 seconds from that time and then store the present data in ST.</p> <p>The memory mode is released if any keys are pressed other than the ST key, IF Band, MPX or RF ATT.</p>
FM	FM	A4 0D	Does not operate during selecting FM. Carries out FM last call CCTS operation (when CCTS is on). Mutes for approx. 1 second.
AM	AM	A4 0E	Does not operate during selecting AM. Carries out AM last call CCTS operation (when CCTS is on). Mutes for approx. 1 second.
UP	UP	A4 56	<p>When this is pressed once, the frequency is moved a step up. If the key is held down, the unit goes to the auto tuning mode after approx. 0.5 seconds. If the key is then held down for approx. 2 seconds, the unit goes to high speed search. High speed search stops when you release your hand. Auto tuning stops when the key is pressed.</p> <p>Will then go to CCTS operation when it stops if CCTS is ON.</p>
DOWN	DOWN	A4 57	The only difference is that frequency goes DOWN. The operation is the same as for UP.
MPX	MPX	A4 1E	<p>It changes as follows each time it is pressed: Auto (Stereo)—Hi Blend—Mono to synchronize the display.</p> <p>During AUTO, a weak input Mute is operating. The Mute does not operate during switching.</p> <p>Mode Memory is possible.</p> <p>Only operates with FM.</p>

9. PANEL FACILITIES

① POWER (STANDBY/ON) switch/Indicator

Press to turn power on or off.

When the power is on, indicator lights.

- When this switch is set to the on position, power is supplied to the tuner's main circuits. The POWER unit's switch is geared to selecting the transformer's secondary so that even in **STANDBY** position, the unit's circuitry will work as long as the power cord is connected to a power outlet.

NOTE:

- The memory will be backed up so long as the power cord is not unplugged.
- If the power cord is unplugged, the memory will be retained for several days.

② IF BAND button

Each time this button is pressed the bandwidth of the IF circuit switches between "normal" and "super narrow" for the FM band and "wide" and "normal" for the AM band.

The selected bandwidth is displayed as follows:

In the FM band the **NORMAL** or **SUPER NARROW** indicator lights up. In the AM band the **NORMAL** indicator lights up or none of the two for "wide".

Set to **SUPER NARROW** in FM or **NORMAL** in AM band in case of interference from other stations.

NOTE:

The setting of this button is memorized together with the station in the station memory.

③ MPX (multiplex) MODE button

Mode changes as follows each time this button is pressed:

This button does not affect AM reception.

AUTO:

Depending on the broadcast station, **STEREO** or **MONO** is automatically selected.

AUTO indicator lights up.

NOTE:

When the signal level is too weak for reception, sound output is automatically muted.

Hi Blend:

Select this position when the stereo signal is noisy. High frequencies will be blended, improving sound quality.

Hi Blend indicator lights up.

MONO:

To receive stereo broadcasts in monaural.

MONO indicator lights up.

NOTE:

The setting of this button is memorized together with the station in the station memory.

④ RF ATT button

Set this switch to ON when receiving strong FM signals (nearly stations) to reduce sound distortion (RF ATT indicator lights). Normally, this switch should be set to OFF.

NOTE:

The setting of this button is memorized together with the station in the station memory.

⑤ BAND selector buttons

FM:

Press to receive FM broadcasts.

AM:

Press to receive AM broadcast.

⑥ CCTS button

(Computer controlled tuning system)

When this button is set to ON, the unit's built-in microcomputer automatically performs the optimum tuning for the station received. (Initially, the CCTS indicator will flash and light continuously when tuning is optimum.)

⑦ MEMORY button

Press to memorize preset stations. The **MEMORY** indicator will remain lit for several seconds. Press the desired **STATION CALL** buttons to memorize it during this period.

MEMORY

⑧ TUNING UP/DOWN buttons

Use these buttons to tune in broadcasting stations. Press UP (+) to receive a station whose frequency is higher than the displayed frequency, and DOWN (-) to tune in to a lower frequency station.

⑨ STATION CALL buttons

Use these buttons to preset stations and to receive already preset stations.

OPERATING DISPLAY

Ⓐ MEMORY indicator

Lights for a few seconds when the MEMORY button is pressed.

Ⓑ CCTS indicator

This indicator flashing when the CCTS is operating.

Ⓒ SIGNAL indicator

Ⓓ NORMAL indicator

Stays lit while the IF BAND button is set to NORMAL.

Ⓔ SUPER NARROW indicator

Stays lit while the IF BAND button is set to SUPER NARROW.

Ⓕ AUTO indicator

Stays lit while the MPX MODE button is set to AUTO.

Ⓖ Hi Blend indicator

Stays lit while the MPX MODE button is set to Hi Blend.

Ⓗ MONO indicator

Stays lit while the MPX MODE button is set to MONO.

Ⓘ STEREO indicator

Lights up when a stereo broadcast is received. (The indicator does not light when the MPX MODE button is set to MONO.)

⓵ RF ATT indicator

Stays lit while the RF ATT button is on.

Ⓚ Frequency indicator

Shows reception band and frequency.

Ⓛ STATION indicator

When a STATION CALL buttons are pressed, it will show the corresponding channel number.

10. SPECIFICATIONS

FM Tuner Section

Frequency range	87.5 MHz to 108 MHz
Usable Sensitivity	
NORMAL	Mono: 12.1 dBf, IHF (1.1 μ V/75 Ω)
50 dB Quieting Sensitivity	
NORMAL	Mono: 15.9 dBf, IHF (1.7 μ V/75 Ω)
	Stereo: 36.2 dBf, IHF (17.7 μ V/75 Ω)
Sensitivity (DIN)	
NORMAL	Mono: 0.75 μ V/75 Ω
	Stereo: 28 μ V/75 Ω
Signal-to-Noise Ratio	Mono: 85 dB (at 80 dBf)
	Stereo: 80 dB (at 80 dBf)
Signal-to-Noise Ratio (DIN)	Mono: 72 dB
	Stereo: 65 dB
Distortion (at 80 dBf)	
NORMAL	Mono: 0.06% (100 Hz)
	0.06% (1 kHz)
	0.1% (6 kHz)
	Stereo: 0.1% (100 Hz)
	0.1% (1 kHz)
	0.15% (10 kHz)
SUPER NARROW	Mono: 0.15% (1 kHz)
	Stereo: 0.5% (1 kHz)
Capture Ratio	
NORMAL	1.0 dB
Alternate Channel Selectivity	
NORMAL	80 dB (400 kHz)
Stereo Separation	60 dB (1 kHz)
	50 dB (20 Hz to 10 kHz)
Frequency Response	+ 0.4 dB (20 Hz to 15 kHz)
	- 1.0 dB (20 Hz to 15 kHz)
Image Response Ratio	50 dB
IF Response Ratio	90 dB
AM Suppression Ratio	60 dB
Spurious Response Ratio	70 dB
Subcarrier Product Ratio	55 dB
Muting Threshold	25.2 dBf (5 μ V/75 Ω)
Antenna Input	75 Ω unbalanced

AM Tuner Section

Frequency range	530 kHz to 1700 kHz (Step 10 kHz)
	531 kHz to 1602 kHz (Step 9 kHz)
Sensitivity (IHF, Loop antenna)	150 μ V/m
Selectivity	40 dB
Signal-to-Noise Ratio	50 dB
Image Response Ratio	40 dB
IF Response Ratio	60 dB
Antenna	Loop Antenna

Audio Section

Output (Level/Impedance)	
FM (100% MOD) FIXED	650 mV/0.9 k Ω
AM (30% MOD) FIXED	150 mV/0.9 k Ω

Miscellaneous

FM T-type Antenna	1
AM Loop Antenna	1
Connecting Cord with Pin Plugs	1
Operating Instructions	1
Control cord with mini pin plugs (U.S., Canadian models only)	1

NOTE:

Specifications and design subject to possible modification without notice, due to improvements.

MAINTENANCE OF EXTERNAL SURFACES

- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surfaces are very dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water and wrung out well, then wipe again with a dry cloth. Do not use furniture wax or cleaners.
- Never use thinners, benzine, insecticide sprays and other chemicals on or near this unit, since these will corrode the surfaces.

POWER-CORD CAUTION

Handle the power cord by the plug. Do not pull out the plug by tugging the cord and never touch the power cord when your hands are wet as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, etc., on the power cord, or pinch the cord. Never make a knot in the cord or tie it with other cords. The power cords should be routed such that they are not likely to be stepped on. A damaged power cord can cause fire or give you an electrical shock. Check the power cord once in a while. When you find it damaged, ask your nearest PIONEER authorized service center or your dealer for a replacement.
